Dr. Joshua Lederberg
Department of Genetics
University of Wisconsin
Madison, Wisconsin

Dear Josh:

I am enclosing the material we discussed, in part, ie, I find I have only one copy of my paper and am sending you the section dealing with gene action. I am also enclosing a copy of a similar section of Horowitz's paper that is to appear this spring in one of the Annual Reviews.

I asked Dr. Sinnott about a lead article in Science and he feels sure that it will be possible. At his suggestion I am writing Bently Glass who, as you know, is the genetics editor for Science.

Next week I hope to draw up an outline of what I would like to propose for this paper and will send this along for your comments.

As ever,

David M. Bonner
Associate Professor of Microbiology
